

Pilot Cities

Understanding the needs of each Pilot

One of the first and most important steps during these early project phase is to get to fully understand the interests and needs of each participating pilot city, so the resulting services are reflect their climate strategies and concerns.

Bilateral Meetings

Hence, a thorough requirement analysis is necessary and the ICT and RTD consortium partners have had initial bilateral meetings with each Pilot City to begin this process.

Due to the ongoing Covid-19 pandemic, the meetings have taken place online so far.

Project KickOff Meetings

The CityCLIM project has had its kick off meeting on the October 7./8.th, 2021. All consortium partners have discussed their joined goals and laid out the agenda for the upcoming months.

FOLLOW US ON

Next Generation City Climate Services

The CityCLIM project aims to build a set of two services aiming at different stakeholders to heighten climate change awareness and foster effective mitigation strategies.

City Administration

We will develop a full-physics 100m UltraHD city weather model that enables us to project & predict the cities' air flow and temperature effects. This insight enables participating city administrations to derive effective targeted measures.

Climate Portal

We will gather available historical meteorological data and visualise them user friendly, so the data becomes accessible and understandable for everyone.
